WHY CHOOSE US

eCorfy has been providing custom software development services to leading companies around the globe for nearly a decade. We focus on custom-fit, flexible solutions to address your unique business needs

Reliability

Our clients keep coming back because they can count on us to deliver technology solutions that are aligned to their goals and translates to real business value while providing best-inclass service.
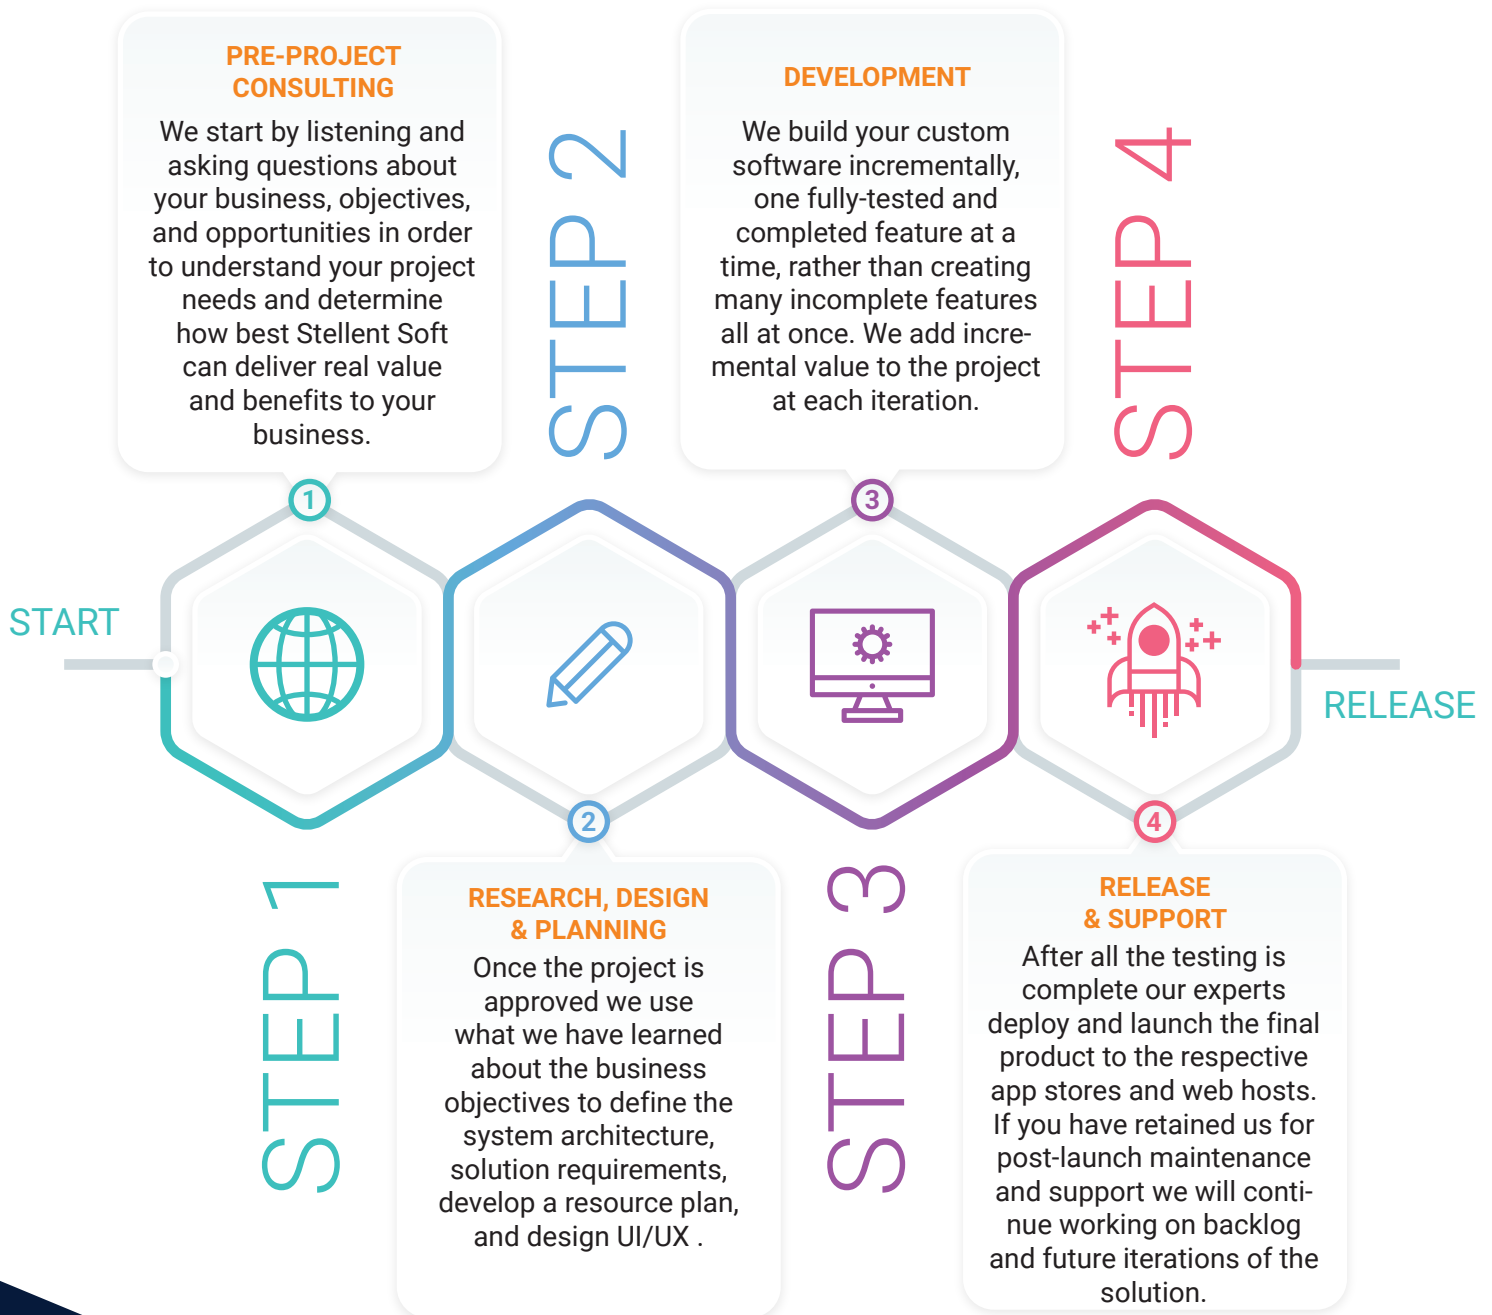

Experience

eCorfy's combined years of software experience and development leadership help us to deliver high value and transformational software to our clients.
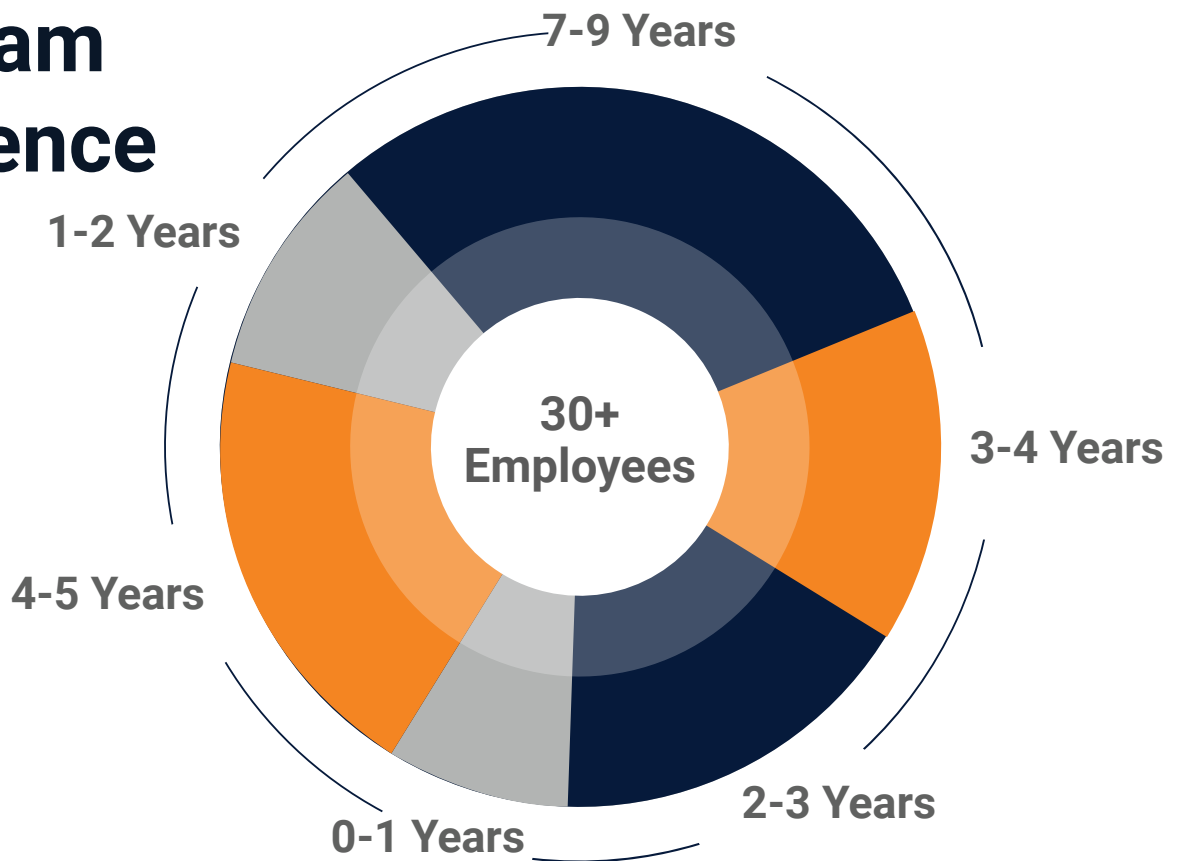

Delivery

Our delivery process follows industry best practices and continuous up-skilling of our teams helps us to stay on top of technology changes in order to keep our clients ahead of the competition.

OUR PROCESS OF WORK

STEP 1

START

PRE-PROJECT CONSULTING

We start by listening and asking questions about your business, objectives, and opportunities in order to understand your project needs and determine how best Stellent Soft can deliver real value and benefits to your business.

1

STEP 2

RESEARCH, DESIGN & PLANNING

Once the project is approved we use what we have learned about the business objectives to define the system architecture, solution requirements, develop a resource plan, and design UI/UX .

2

STEP 3

DEVELOPMENT

We build your custom software incrementally, one fully-tested and completed feature at a time, rather than creating many incomplete features all at once. We add incremental value to the project at each iteration.

3

STEP 4

RELEASE & SUPPORT

After all the testing is complete our experts deploy and launch the final product to the respective app stores and web hosts. If you have retained us for post-launch maintenance and support we will continue working on backlog and future iterations of the solution.
